

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Thu 06/02/2020 TO 18:00HRS Fri 07/02/2020

Hazard Level	Avalanche Probability
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

No precipitation is forecast. Becoming cooler at all elevations. South-East winds will become strong by the end of the day.

Forecast Snow Stability and Avalanche Hazard

Little change. The snowpack will continue to consolidate in all locations and show good stability. Cornices and rockfall will continue to pose some residual objective danger. The avalanche hazard will be Low

Observed Avalanche Hazard - Thu 06/02/2020

Observed Weather Influences

Generally mild air temperatures but significantly cooler surface conditions above 900m. Light SW winds.

Observed Snow Stability and Avalanche Hazard

The snowpack is stable in most locations. Moist well consolidated snow at lower altitudes and much firmer surface snow above 900m. Snow on sun exposed aspects at all elevations softened a little by the end of the day. Old, generally small cornices overhang selected very steep NE to SE aspects above 950m. The avalanche hazard is Low

Mountain Conditions

Observed Mountain Travel Conditions

Crust at higher elevations, moist snow lower down. 20% of cloud cover at mid-day Winds approx 10 - 20 mph fresh, cooling etc
