

THE AVALANCHE HAZARD WILL BE MODERATE
Avalanche Hazard Forecast for Tuesday 11/02/2020
Avalanche Problems

Wind Slab
Forecast Snow Stability & Avalanche Hazard

Fresh moderately bonded windslab will continue to build on North through East to South aspects above 650m. Areas mostly effected will be crag aprons, corrie rims, gullies and other wind sheltered locations. Cross loading will affect other aspects. In wind scoured areas the snow is lying on bare ground and is mainly superficial. The avalanche hazard will be Moderate.

Forecast Weather Influences

The strong to gale force westerly winds will continue with snow showers throughout the period. The freezing level remaining around 400m.

Comments

The cold strong westerly airstream will persist bringing frequent snow showers.
