

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Wednesday 12/02/2020

Avalanche Problems

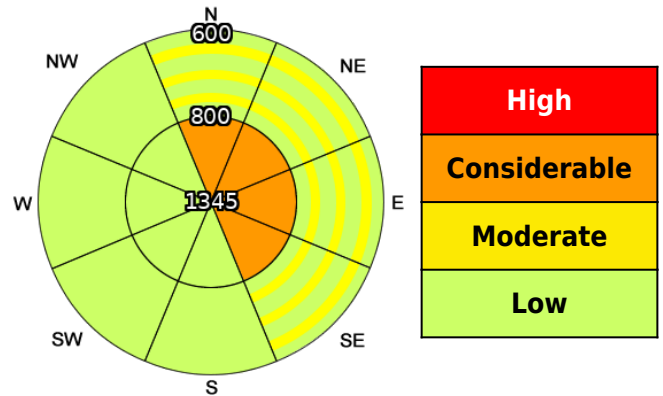

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Unstable windslab will continue to be deposited in wind sheltered areas onto existing deep accumulations. Greatest deposits will be on North through East to South-East aspects above 800 metres. Fragile cornices will continue to build above these aspects. Other wind-sheltered locations will also be affected due to cross loading. Slopes exposed to the strong winds will generally be scoured and stable. The avalanche hazard will be Considerable.

Forecast Weather Influences

Winds will be strong Westerly overnight; West-South-Westerly through the day, and easing during the afternoon. Snow shower are expected throughout the forecast period, heaviest overnight. The freezing level will be around 300 metres.

Comments

Winter conditions continue.
