Avalanche Problems

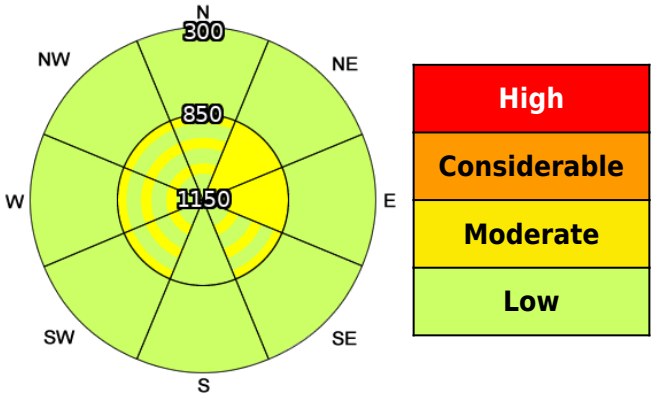

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Deep areas of unstable windslab will remain in sheltered locations such gullies and on North-East to South-Easterly aspects. Some redistribution of existing snow will form further areas of unstable windslab on Westerly to Northerly aspects mainly above 850 metres. Redistributed areas should be generally avoidable. Cornices will be fragile. Areas scoured by the recent strong winds will generally be stable.The avalanche hazard will be Moderate.

Forecast Weather Influences

There will be a period of dry and cold conditions with freezing levels around 250 metres. Southerly winds overnight will back generally North Easterly and become strong for a few hours around dawn. Wind strengths will moderate through the day.

Comments

High pressure will bring dry conditions with a severe frost on Wednesday night. Becoming calmer through the day.
