

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Tuesday 18/02/2020

Avalanche Problems

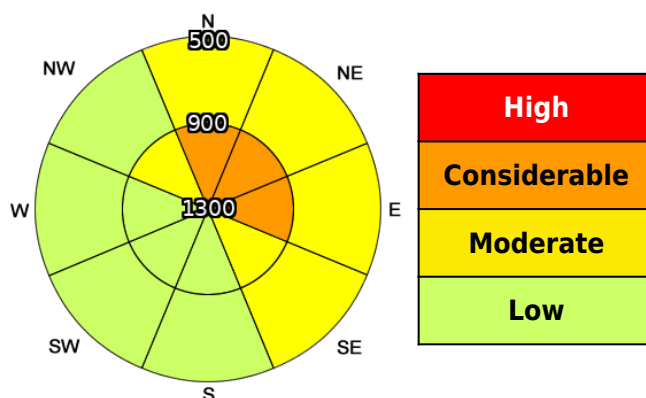

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Moderate and weakly bonded windslab will become more widespread on Northerly to Easterly aspects above 900 metres. Areas most affected will be in steep sheltered locations especially around coire rims, gully tops, crag aprons and convexities. Localised windslab will develop on North-West and South-East aspects due to cross loading. Cornices will be unstable. Localised windslab on steep sheltered banks below 900 metres. The avalanche hazard will be Considerable.

Forecast Weather Influences

Snow showers continuing throughout the forecast period on strong to gale force West-South-Westerly winds. Cooler temperatures with freezing levels falling to around 600 metres.

Comments

Wintry unsettled weather continues.
