

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Mon 24/02/2020 TO 18:00HRS Tue 25/02/2020

Hazard Level	Avalanche Probability
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

Light to moderate South-West winds over the summits with snow showers above 400m.

Forecast Snow Stability and Avalanche Hazard

Areas of unstable windslab will continue to form in sheltered locations. Greatest accumulations will be on North, North-East and East aspects above 900m. Localised areas of unstable snow will remain on Westerly aspects. The avalanche hazard will be Moderate.

Observed Avalanche Hazard - Mon 24/02/2020

Observed Weather Influences

Strong Easterly winds with snow showers above 300m.

Observed Snow Stability and Avalanche Hazard

Areas of moderately bonded snow are present on many aspects above 900m; Fresh windslab is present on sheltered South-West, West and North-West aspects while some older windslab is still present on North, North-East, East and South-East aspects. The avalanche hazard is Moderate.

Mountain Conditions

Observed Mountain Travel Conditions

Strong winds at altitude with poor visibility at times
