Forecast Snow Stability & Avalanche Hazard

The existing snowpack will consolidate and stabilise in the colder conditions. However, through the day fresh areas of moderate to poorly windslab will accumulate above 800 metres in sheltered areas on mainly Northerly to Easterly aspects. The tops of slopes and gullies will be most affected. Windward aspects will be frozen and stable. The avalanche hazard will be Moderate.

Forecast Weather Influences

Overnight the freezing level will drop to around 700 metres where it will remain. Through the day showers will fall as snow above 600 metres. Winds will be from the South-West.

Comments

A very wet day on the hills on Saturday. Potentially becoming very icy at higher level as the freezing level drops.
