Avalanche Hazard Forecast

Issued 09/03/2020

FOR PERIOD 18:00HRS Mon 09/03/2020 TO 18:00HRS Tue 10/03/2020

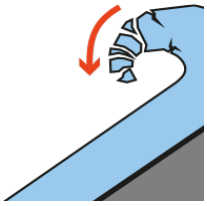
THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Tuesday 10/03/2020

Avalanche Problems

Wind Slab

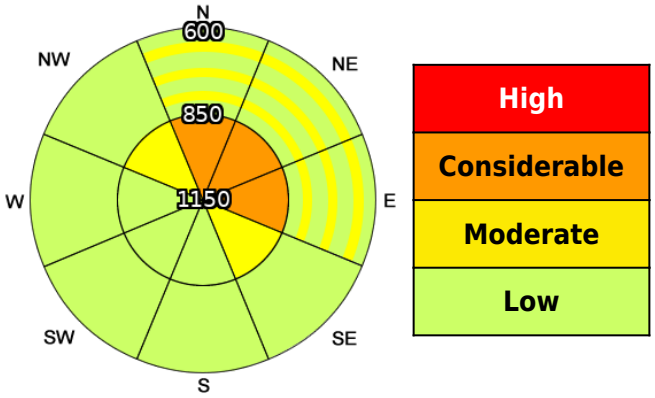
Wet Snow



Cornices

Forecast Snow Stability & Avalanche Hazard

Milder and wet conditions overnight and at the start of the day will give a period of higher instability in gullies, corniced areas and on slopes with a Northerly through East to South-Easterly aspect mainly above 850 metres. A return to cooler conditions through the day will aid the consolidation process of the older snow. New snow amounts are not expected to be significant. Recent cornices will remain unstable. The avalanche hazard will be Considerable.



Forecast Weather Influences

Milder conditions overnight with rain at all levels becoming cooler through the day with light snow showers. Summit winds will be Gale to Severe Gale generally Westerly. The freezing level will rise above the summits overnight lowering to around 700 metres by the end of Tuesday.

Comments

Mild and wet overnight becoming cooler through the day with mainly light snow showers. Snowpack stability will improve through the course of Tuesday.
