

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Sunday 22/03/2020

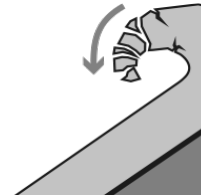

Avalanche Problems

Wind Slab

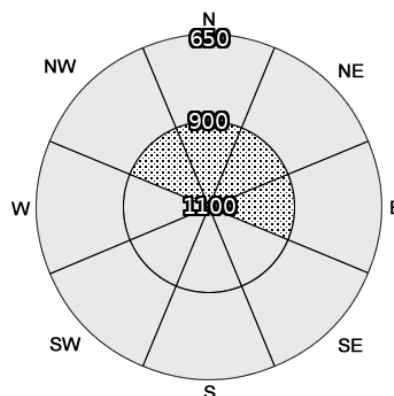

Persistent Weak Layers

Cornices

Forecast Snow Stability & Avalanche Hazard

Good stability in most locations at lower altitudes. Residual instability will persist in colder, dry snow on very steep NW through N to NE aspects above 900m. Large cornices will be present over many steep lee slopes and these may weaken as temperatures rise later. The avalanche hazard will be Moderate.

Forecast Weather Influences

Dry throughout. Cold overnight and during the morning; much milder in the afternoon. Easing SE winds becoming light to moderate S later.
