

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Saturday 05/12/2020

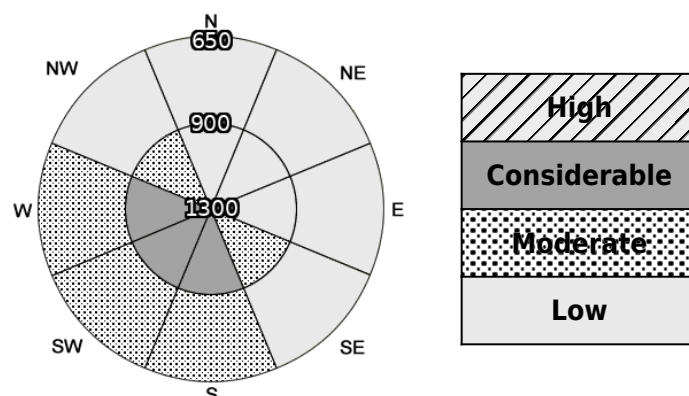

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

Unstable windslab will continue to build and gain depth in steep wind sheltered locations on South-East through South to North-West aspects above 900 metres. Areas most affected will be gully tops, coire rims and ridge flanks. Below this the snowpack will generally have consolidated in milder temperatures however localised areas of fresh windslab will be present on some steep slopes and banks. The avalanche hazard will be Considerable.

Forecast Weather Influences

Heavy snow showers will continue throughout the night, becoming lighter during the day. Winds will be strong North-Easterly overnight decreasing to moderate North-Easterly through the day. The freezing level will be around 700 metres.

Comments

Continuing wintry for the next few days.
