

THE AVALANCHE HAZARD WILL BE MODERATE**Avalanche Hazard Forecast for Wednesday 30/12/2020****Avalanche Problems****Wind Slab****Cornices****Forecast Snow Stability & Avalanche Hazard**

There will be a good cover of snow on all aspects above 400 metres and mostly lying on bare rock. Instabilities will be present in additional windslab which will build on East through South to South-West aspects above 750 metres. Areas affected will be steep wind sheltered areas such as gullies and coire rims where accumulations will gain greatest depth. Cornices will begin to develop above these aspects. The avalanche hazard will be Moderate.

**Forecast Weather Influences**

Winds will be moderate North-Westerly backing North-North-West during the afternoon. There will be snow showers throughout the period. The freezing level will be around 350 metres.

Comments

Remaining wintry for the next few days, trail breaking hard work at times in the fresh snow.
