

THE AVALANCHE HAZARD WILL BE MODERATE**Avalanche Hazard Forecast for Friday 01/01/2021****Avalanche Problems****Wind Slab****Cornices****Forecast Snow Stability & Avalanche Hazard**

Much of the existing snowpack will continue to stabilise with a surface crust developing as the freezing level lowers. Above 800 metres pockets of instability will persist on North-East through East to South-West aspects with the tops of gullies particularly affected. During the day new patches of windslab will accumulate in sheltered locations, primarily on South-East to South-West aspects. The avalanche hazard will be Moderate.

**Forecast Weather Influences**

The freezing level will be around 600 metres initially, dropping to 400 metres by the end the forecast period. Winds will be predominantly Northerly, gale force overnight, moderating during the day. Overnight there will be showers of snow above 500 metres and to lower levels as the day progresses.

Comments

Continued snow showers expected till Saturday morning on moderate Northerly winds.
