

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Wednesday 20/01/2021

Avalanche Problems

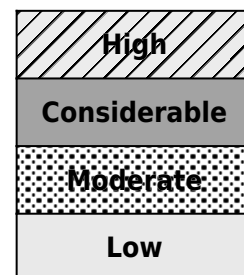

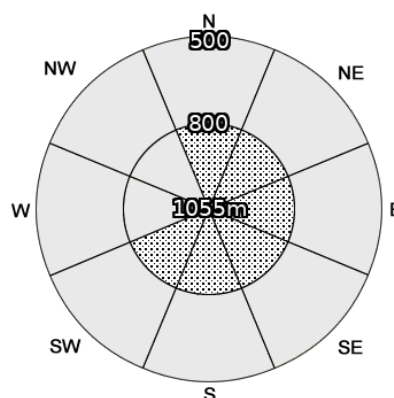

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

At first windslab instabilities will remain on high terrain on North through East to South-East aspects above 800 metres. By tomorrow morning as the wind strengthens there will be some redistribution of the snow and cross loading. These newer windslab instabilities will begin to accumulate on wind sheltered South and South-West aspects above 800 metres. Most affected will be wind sheltered coire rims, scarp slopes and the tops of gullies. The avalanche hazard will be Moderate.

Forecast Weather Influences

The moderate South-West winds will reduce in strength this evening becoming South-South-East, backing East-South-Easterly overnight and strengthening to moderate North-North-East Wednesday afternoon. No precipitation is expected. The freezing level will lower from 600 metres to around 400 metres.

Comments

Cold and dry tomorrow but then we can expect more unsettled showery weather.
