

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Monday 25/01/2021

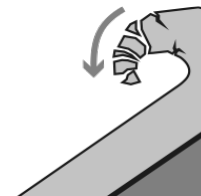

Avalanche Problems

Wind Slab

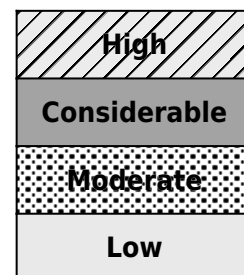

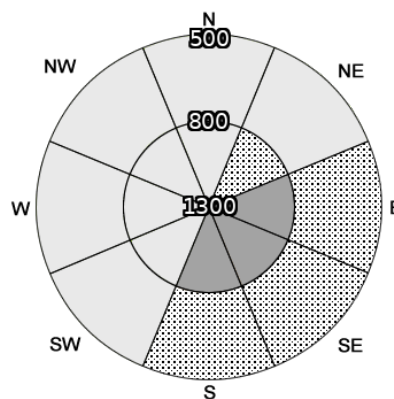

Persistent Weak Layers

Cornices

Forecast Snow Stability & Avalanche Hazard

Accumulations of weakly bonded windslab will persist on steep slopes and convexities on East to South aspects above 800 metres. Redistribution of snow will lead to additional fresh weakly bonded windslab developing on North-East to South-East aspects. Fragile cornices will be present above these aspects. Localised instabilities will be present on East to South aspects at lower elevations. Slopes exposed to the wind will be scoured and stable. The avalanche hazard will be Considerable.

Forecast Weather Influences

It will be a dry day. Moderate to strong Westerly winds overnight will veer North-Westerly and decrease to moderate during the day. The freezing level will gradually rise to 600 metres.

Comments

Remaining cold for the next few days,
