

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Thursday 04/02/2021

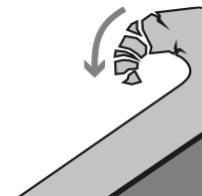

Avalanche Problems

Wind Slab

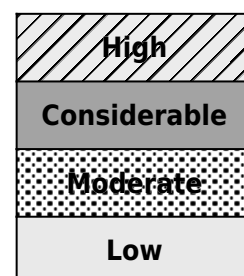

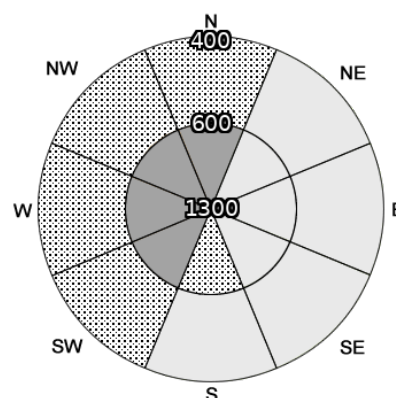

Persistent Weak Layers

Cornices

Forecast Snow Stability & Avalanche Hazard

Further loading onto existing snowpack weaknesses; poorly bonded windslab will become more widespread on South-West through West to North aspects above 600m; here avalanches are likely. Steep convex terrain and wind sheltered locations will be especially affected. Instabilities persisting on steep convex South aspects. Localised poorly bonded windslab will continue to develop on these aspects on steep banks below 600m and above 400m. Fragile cornices. The avalanche hazard will be Considerable.

Forecast Weather Influences

Persistent snowfall at all levels on gale force Easterly winds. The 300 metre freezing level will rise to 400 metres during the day.

Comments

Steep lee banks at lower altitudes affected by unstable windslab!
