

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Thursday 04/02/2021

Avalanche Problems

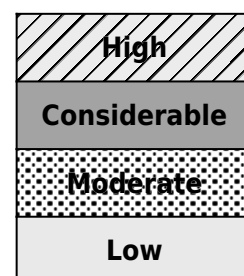

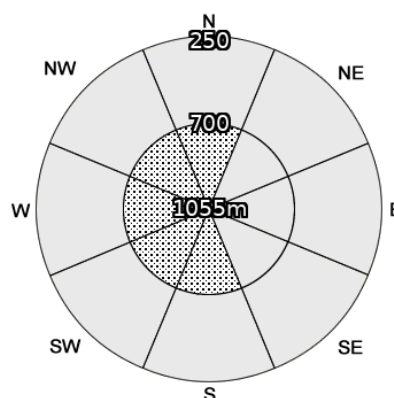

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Redistributed snow will continue to build wind slab instabilities onto wind sheltered South-West to North-West aspects. Cross loading and some underlying weaknesses will linger on South and North aspects. These instabilities mainly affecting steeper wind sheltered terrain above 700m on South through West to North aspects, mainly coire rims, convexities and the tops of gullies. Cornices will be fragile. Better stability on wind exposed Easterly aspects. The avalanche hazard will be Moderate.

Forecast Weather Influences

The storm strength East winds will weaken slightly to become gale force by the morning. Remaining dry with a chance of a light showers or two later tomorrow afternoon. Staying cold, the freezing level hovering around the 150-200 metre level.

Comments

Staying cold with some snow showers. Severe and blizzard conditions on the tops with the Easterly gales.
