

THE AVALANCHE HAZARD WILL BE MODERATE**Avalanche Hazard Forecast for Sunday 14/02/2021****Avalanche Problems****Wind Slab****Persistent Weak Layers****Wet Snow****Cornices****Forecast Snow Stability & Avalanche Hazard**

At first moderately bonded windslab and underlying snowpack weaknesses will remain on South-West through North to North-East aspects above 650 metres. As the freezing level begins to lift some initial softening and consolidation within the snowpack can be expected. By the afternoon some wet snow instabilities will affect the same above mentioned aspects. The snowpack will soften on all aspects and any remaining cornices will be prone to collapse. The avalanche hazard will be Moderate.

**Forecast Weather Influences**

The strong South-East winds will increase in strength tonight becoming generally strong to gale force South-South-East. Patchy light hill snow showers are expected, these falling as rain at lower to mid-altitude levels. The freezing level will stay low at first then rise gradually and erratically to above summit levels by tomorrow afternoon.

Comments

The cold front clearing to the East by Sunday evening with showers following.
