

THE AVALANCHE HAZARD WILL BE MODERATE**Avalanche Hazard Forecast for Tuesday 16/02/2021****Avalanche Problems****Wind Slab****Wet Snow****Cornices****Forecast Snow Stability & Avalanche Hazard**

At first the snowpack will continue to deplete. Wet snow instabilities will remain. From early morning new snow will build fresh windslab accumulations, these will be moderately bonded to the older snowpack. Gradually the older snowpack will firm up as the freezing level lowers. These windslab instabilities will mainly affect steeper wind sheltered terrain on West through North to North-East aspects above 800 metres. Cornices will remain fragile. The avalanche hazard will be Moderate.

**Forecast Weather Influences**

The gale force South-South-West winds are remaining variable Southerly becoming more South-South-West again tomorrow. Frequent moderate showers overnight and tomorrow. These falling as hill snow on the tops as the freezing level begins to fall to summit levels in the early hours down to around 900 meters later tomorrow.

Comments

A bit dryer by Tuesday evening. Then another band of rain and summit snow (900m+) arriving late in the night followed by showers mainly in the North-West with the chance of snow down to 500-600m.
