

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Saturday 27/02/2021

Avalanche Problems

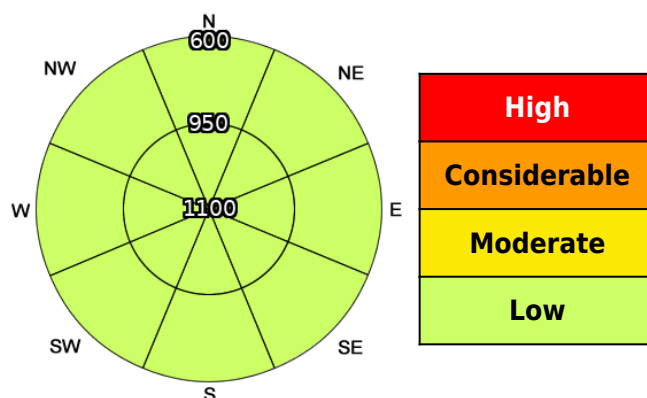

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

A steady thaw will continue. Some wet snow instabilities are possible associated with light rain showers early in the period, on N to E aspects above 950m; thereafter the snowpack although moist, will remain generally well bonded and stable. All remaining cornices will be suspect during thawing conditions. The avalanche hazard will be Low.

Forecast Weather Influences

A few light rain showers will affect all elevations very early in the period, then dry. The winds will be moderate SW and WSW. Freezing level will fluctuate around summit elevations.
