

THE AVALANCHE HAZARD WILL BE LOW

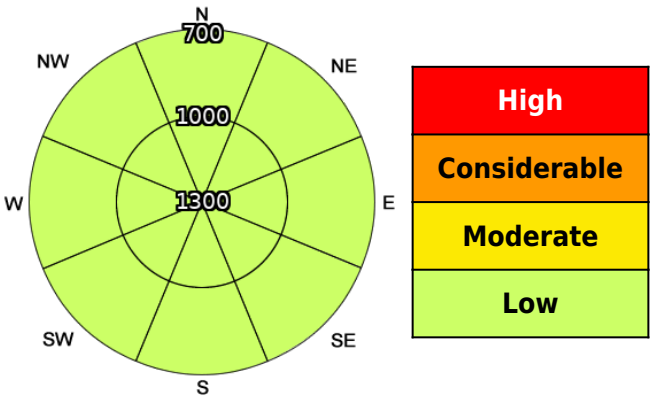

Avalanche Hazard Forecast for Sunday 28/02/2021

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Little change expected within the snowpack which will remain well bonded and stable throughout, firm above 800 metres soft and thawing at lower altitudes. Sun exposed slopes will soften though the day leading to potential for wet snow instabilities and cornice collapse. Large cornices will continue to overhang some Northerly aspects. The avalanche hazard will be Low.

Forecast Weather Influences

Dry conditions throughout the forecast period. Clear during the night with a mix of patchy fog sunshine and cloud through the day. South-Westerly winds will be light to moderate. Although the freezing level will generally remain above the summits the airmass over the mountains will be cool.

Comments

Although the freezing level is mostly above the summits, the snowpack is expected to remain very firm at higher levels with serious run out potential. Sun exposed slopes will continue to soften and thaw.
