

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Monday 15/03/2021

Avalanche Problems

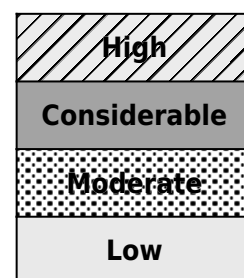

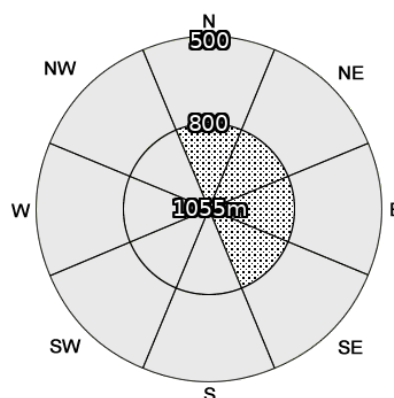

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

Localised instabilities within the snowpack will persist on North through East to South-East aspects above 800 metres. Most affected areas will be corrie rims, gullies and steep sheltered locations. Any remaining cornices may collapse due to the temperature rise. A gradual thaw at all levels will occur later in the day. The exposed old snowpack will remain well bonded with a gradual softening through the forecast period. The avalanche hazard will be Moderate.

Forecast Weather Influences

Strong North-West winds will gradually ease and back to the West becoming light during the forecast period. Any passing snow showers will be insignificant. Freezing level will be at 800 metres gradually rising from mid morning to above the summits.

Comments

Fairly unsettled weather pattern for the next few days.
