

THE AVALANCHE HAZARD WILL BE LOW**Avalanche Hazard Forecast for Friday 19/03/2021****Avalanche Problems****Forecast Snow Stability & Avalanche Hazard**

The snowpack will be generally well bonded and stable throughout, thawing at all elevations. Softer at lower levels but firmer elsewhere, especially in areas where the old snow is exposed. However, minor wet snow instabilities are possible on very steep terrain, mainly North to South-East aspects above 800 metres and remaining cornices will be fragile. The avalanche hazard will be Low.

**Forecast Weather Influences**

A mild and moist Northerly airflow will bring persistent low cloud and drizzle for much of the period. The fresh, generally North wind will become lighter through the day. The freezing level will remain well above the summits.

Comments

The mild, and cloudy conditions are likely to extend into the weekend, but colder and clearer on Sunday.
