

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Friday 26/03/2021

Avalanche Problems

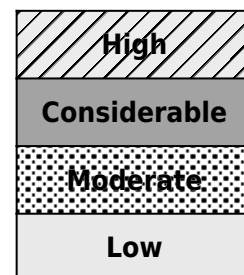

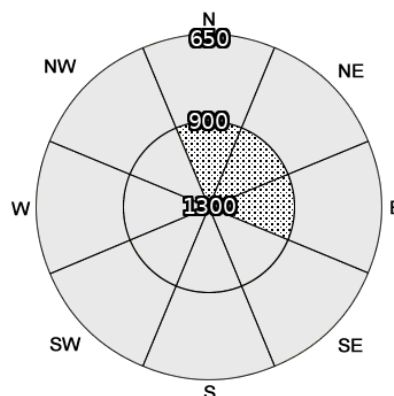

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

New accumulations of unstable windslab will develop mainly on North to East aspects above 900 metres. Areas especially affected will be below coire rims, the tops of gullies, scarp slopes and crag aprons. Fragile cornices will also develop on these aspects. Isolated windslab accumulations will develop on North-West and South-East aspects due to cross loading. Elsewhere the old snowpack will be firm well bonded and stable. The avalanche hazard will be Moderate.

Forecast Weather Influences

Overnight there will be frequent showers falling as snow above 1000 metres on strong to gale force South-South-Westerly winds. Cooler during the day with snow showers continuing above 500 metres on strong South-West winds. The 1100 metre freezing level will gradually fall to 600 metres by the end of the day.

Comments

The old snowpack will remain firm with serious run out potential especially on steep slopes.
