

THE AVALANCHE HAZARD WILL BE MODERATE**Avalanche Hazard Forecast for Sunday 28/03/2021****Avalanche Problems****Wet Snow****Cornices****Forecast Snow Stability & Avalanche Hazard**

There will be a short period of instability at first as rain showers soften the snowpack this evening. Then a re-freezing overnight as the freezing level lowers with further softening later. Localised moderately bonded instabilities will remain on North-West through East to South-East aspects above 700 metres. Affecting steep wind-sheltered terrain such as coire rims and gully tops. Cornices above these aspects will be unstable and prone to collapse. The avalanche hazard will be Moderate.

**Forecast Weather Influences**

Storm force South winds overnight will become strong to gale force West-South-Westerly throughout the period. There will be moderate showers falling initially as snow above 900 metres. By the early morning the freezing level will lower to around 600 metres and then gradually rise to above summit levels by the end of the day.

Comments

Rain/sleet will turn more showery and occasionally heavy through the early hours of Sunday before clearing Eastwards.
