

THE AVALANCHE HAZARD WILL BE LOW**Avalanche Hazard Forecast for Sunday 04/04/2021****Avalanche Problems****Wind Slab****Forecast Snow Stability & Avalanche Hazard**

Increasing amounts of new snow will settle late in the day, mostly onto bare ground, with localised accumulations of unstable windslab forming in steep sheltered terrain, mainly North-East to South-East aspects above 700 metres. Amounts are not expected to gain significant depth and extent. The patchy old snowpack will re-freeze, remaining firm and well bonded throughout. The avalanche hazard will be Low.

**Forecast Weather Influences**

Dry overnight, with progressively more precipitation through the day, falling as snow to low elevations as the freezing level lowers from the summits in the morning to 500 metres by the end of the period. The generally Westerly wind will gradually strengthen to gale, severe gale force by the afternoon.

Comments

A cold front crossing the area late in the day tomorrow will introduce a cold airflow with strong winds and blizzard conditions at times on the tops. Remaining cold and windy into next week with snow showers.
