

THE AVALANCHE HAZARD WILL BE MODERATE**Avalanche Hazard Forecast for Monday 05/04/2021****Avalanche Problems****Wind Slab****Cornices****Forecast Snow Stability & Avalanche Hazard**

Localised areas of unstable windslab will develop throughout the period, mainly on steep South-East to South-West aspects, mostly above 700 metres. Coire rims, ridge flanks and tops of gullies most notably affected, especially where it overlies firm old snow. Cross loading will affect other aspects. New and fragile cornice growth expected above the same aspects. Windward slopes will be scoured. The patchy old snow will be re-frozen. The avalanche hazard will be Moderate.

**Forecast Weather Influences**

Persistent North-North-Westerly summit gales or severe gales and frequent snow showers at all levels throughout the period. It will be bitterly cold with freezing around glen level and -8C summit air temperature during the day.

Comments

A strong Arctic maritime Northerly airflow will persist over the next two days, bringing unseasonably cold conditions, snow showers with blizzards at times and severe windchill.
