

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Saturday 08/05/2021

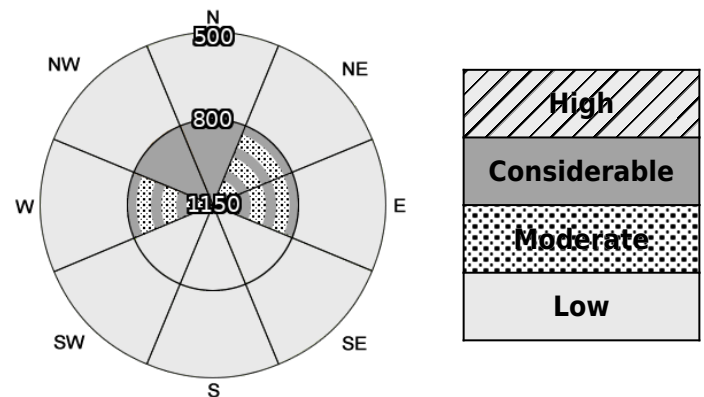

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

The existing snowpack although soft, will continue to improve in stability and will be good in most areas. Localised instabilities will persist though on E aspects above 1100m, in isolated steep windslab convexities. As the day progresses, accumulations of new and drifting snow will build unstable deposits on West through North to North-Easterly aspects, mostly above 950m with gully exits, coire rims and scarp slopes most affected. The avalanche hazard will be Moderate

Forecast Weather Influences

Dry overnight with precipitation developing and falling as snow above 800m from mid morning, then throughout the day. Winds North-Westerly in the evening veering overnight becoming South-Easterly and strengthening to severe gale by mid afternoon.

Comments

Generally stable conditions in widespread soft snow cover. Strengthening winds and snow expected with drifting
