Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Sun 28/11/2021 TO 18:00HRS Mon 29/11/2021

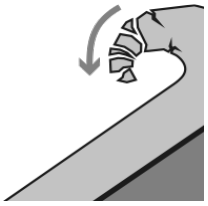

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Monday 29/11/2021

Avalanche Problems

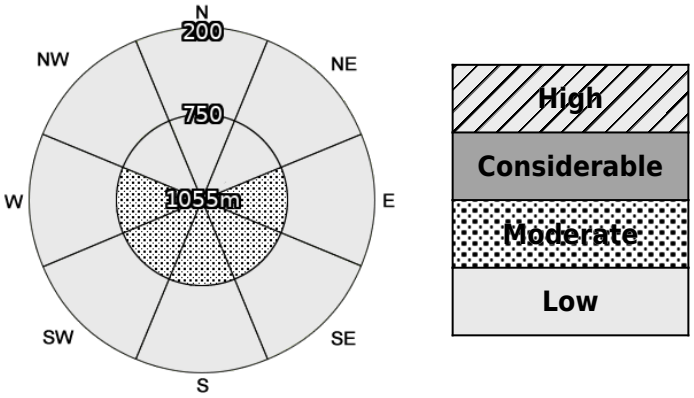

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

There will be considerable snow loss through the day, particularly at lower levels. Heavy thaw conditions, mainly during the afternoon, will heighten instabilities in existing localised areas of moderately well bonded windslab. Most affected will be on steep terrain, generally above 750 metres, East, through South to West aspects. Cornices above steep slopes on similar aspects will be prone to collapse. The avalanche hazard will be Moderate.

Forecast Weather Influences

Mild conditions are expected to move eastwards across the area with rain at all levels by midday, preceded by some summit sleet and snow early morning. The freezing level will quickly rise above the summits by daybreak from 450 metres overnight. Light Northerly winds will back South overnight, becoming a fresh to strong South-Westerly by first light, veering West later.

Comments

Expect a poor day with a wet, windy and cloudy afternoon. Snowpack stability will begin to improve by the end of the period.
