

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Monday 29/11/2021

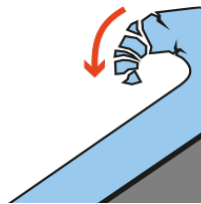

Avalanche Problems

Wind Slab

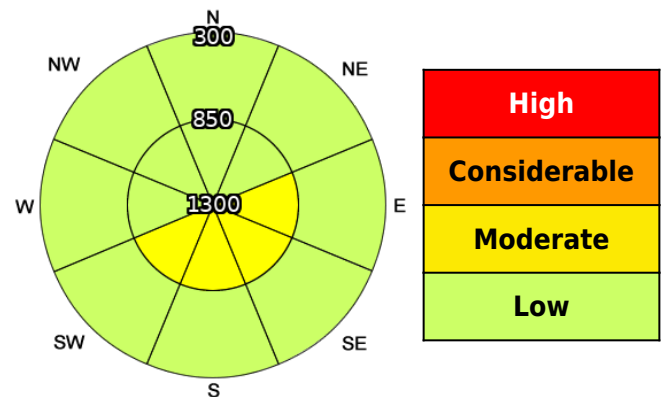

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

Unstable windslab will be present in sheltered areas, with greatest accumulations on East through South to South-West aspects above 850 metres. West aspects will also be affected by recent cross-loading. Cornices above these aspects fragile. Some fresh windslab will be deposited during the morning on North-to East aspects but accumulations are not expected to be significant. The avalanche hazard will be Moderate.

Forecast Weather Influences

Winds are expected to be light overnight, initially North-Westerly then backing South-Westerly. During the day light South-West winds will strengthen to strong, and then veer Westerly during the afternoon. Overnight the freezing level will be around 400 metres, then during the morning it will rise and from early afternoon be above the summits. There will be some light snowfall during the morning.
