

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Sun 28/11/2021 TO 18:00HRS Mon 29/11/2021

| Hazard Level | Avalanche Probability |
|---------------------|--|
| Very High | Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected. |
| High | Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected. |
| Considerable | Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible. |
| Moderate | Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places. |
| Low | Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain. |

Forecast Weather Influences

Winds are expected to be light overnight, initially North-Westerly then backing South-Westerly. During the day light South-West winds will strengthen to strong, and then veer Westerly during the afternoon. Overnight the freezing level will be around 400 metres, then during the morning it will rise and from early afternoon be above the summits. There will be some light snowfall during the morning.

Forecast Snow Stability and Avalanche Hazard

Unstable windslab will be present in sheltered areas, with greatest accumulations on East through South to South-West aspects above 850 metres. West aspects will also be affected by recent cross-loading. Cornices above these aspects fragile. Some fresh windslab will be deposited during the morning on North-to East aspects but accumulations are not expected to be significant. The avalanche hazard will be Moderate.

Observed Avalanche Hazard - Sun 28/11/2021

Observed Weather Influences

Winds were moderate to strong Northerly. It was freezing at all levels and there were snow showers during the morning.

Observed Snow Stability and Avalanche Hazard

Unstable windslab is present in sheltered areas, with greatest accumulations on East through South to South-West aspects above 850 metres. West aspects are also affected due to cross-loading. Scouring by recent strong winds has affected some exposed windward slopes. The avalanche hazard is Moderate.

Mountain Conditions

Observed Mountain Travel Conditions

Snow cover at all levels - some exposed ridges scoured. Very poor visibility above 900m. Winds 20-30mph, with stronger gusts.
