FOR PERIOD 18:00HRS Tue 30/11/2021 TO 18:00HRS Wed 01/12/2021

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Wednesday 01/12/2021

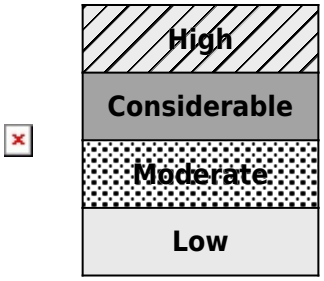

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

The remaining laying wet snow will continue to thaw and deplete this evening and begin to firm up as the freezing level lowers in the early hours. Drifting new snow will begin to accumulate on wind sheltered terrain on South-East to South-West aspects during the day above 750 metres. These accumulations will be shallow at first and much of it laying on bare ground. The avalanche hazard will be Low.

Forecast Weather Influences

There will be strong North-West winds tonight becoming Northerly later. The freezing level will fall to summit levels and will continue to lower overnight then will be at around 250 metres tomorrow. Showers are expected throughout the period bringing moderate amounts of snow to lower levels tomorrow.

Comments

The melt freeze cycle continues.
