

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Friday 10/12/2021

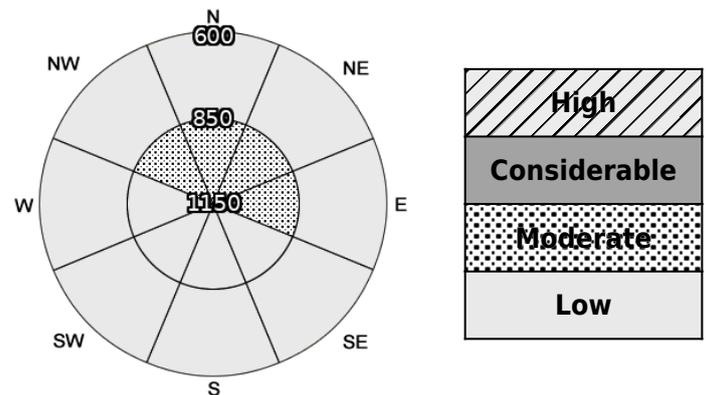

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

Localised moderately bonded deposits will be present in steep, wind sheltered features mostly on North to East aspects above 850 metres. Some North-West aspects may also be affected. Elsewhere there will be a covering of snow on most aspects with deeper drifts in some wind sheltered features. The avalanche hazard will be Moderate.

Forecast Weather Influences

The freezing level will generally be around 600 metres. Light snowfall is expected overnight, dry during the day. Winds, initially Southerly but veering to the North-West overnight. Strong throughout the day.

Comments

Deeper deposits are currently poorly bonded to the ground. Particularly where grassy.
