Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Sat 11/12/2021 TO 18:00HRS Sun 12/12/2021

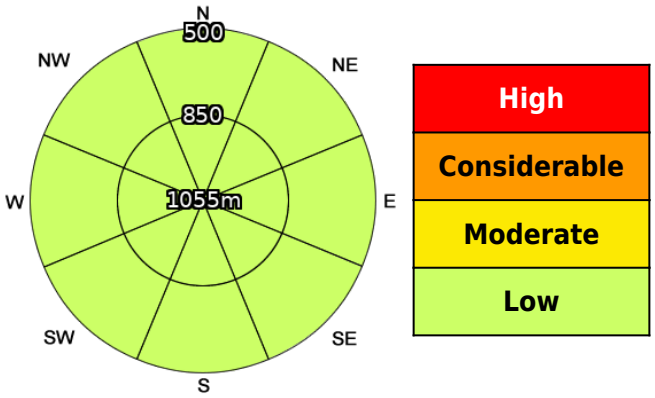
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Sunday 12/12/2021

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The snowpack will continue to gradually consolidate in the colder drier conditions. Above 850 metres the moist snowpack will begin to firm up, at lower elevations the snow cover will continue to thaw and slowly diminish. Stability will be good. The avalanche hazard will be Low.



Forecast Weather Influences

It will be a dry cloudy day. The freezing level will gradually fall to around 850 metres by dawn before rising above the summits again towards the end of the afternoon. Strong South-Westerly winds overnight will gradually decrease to moderate during the day and back South-Easterly.

Comments

Southerly winds increasing to storm force on Sunday night easing to strong South-Westerly winds with snow showers on Monday.
