

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Sunday 12/12/2021

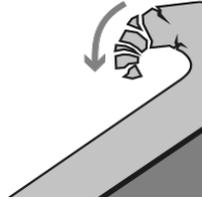

Avalanche Problems

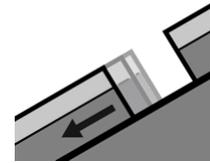

Persistent Weak Layers

Wet Snow

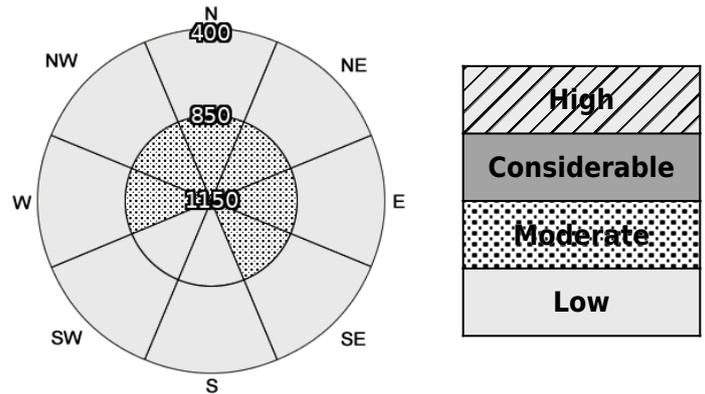

Cornices

Gliding Snow

Forecast Snow Stability & Avalanche Hazard

New snow amounts are not expected to be significant. Overnight and during the morning the moist snowpack will partially re-freeze and consolidate before being affected by rain again. This will lead to moderately bonded surface wet snow instabilities in particular on North through East to South-East aspects above 850 metres. Cornices will become unstable. The avalanche hazard will be Moderate.

Forecast Weather Influences

Light snow showers dying away during the morning, then an area of rain spreads in from the South. Snow showers quickly becoming rain as the freezing level rises above all summits. West to South-West summit gales to severe gales easing for a time late Sunday morning, before backing South or South-East and strengthening again in the afternoon.

Comments

Light or moderate rain fall through Sunday, with strong Southerly winds. Colder on Monday.
