

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Monday 13/12/2021

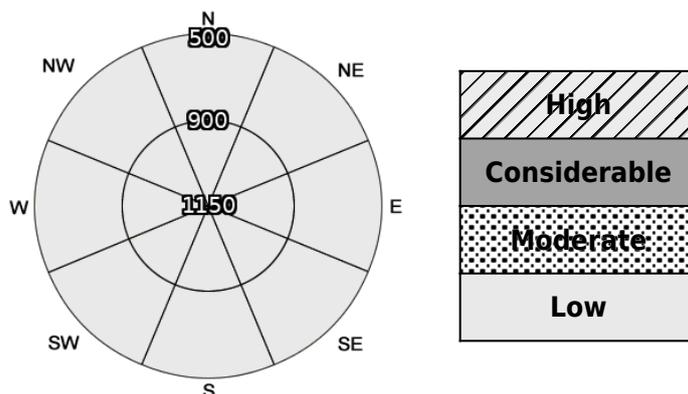

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

The moist snowpack will consolidate as the freezing level lowers. New snow amounts are not expected to be significant, however shallow windslab will start to build in sheltered locations. These areas will tend to be localised with the tops of summit gullies and steep coire headwalls mainly affected on North to Easterly aspects above 900 metres. The avalanche hazard will be Low

Forecast Weather Influences

Sunday night, a short spell of mild air and some rain, then colder showery conditions during the early hours and persisting through Monday. The freezing will lower to around 650 metres in the early part of Monday with light snow showers. Winds will be strong mainly from a South-Westerly direction.

Comments

Getting colder on Monday.
