Avalanche Hazard Forecast

Issued 12/12/2021

FOR PERIOD 18:00HRS Sun 12/12/2021 TO 18:00HRS Mon 13/12/2021

THE AVALANCHE HAZARD WILL BE LOW

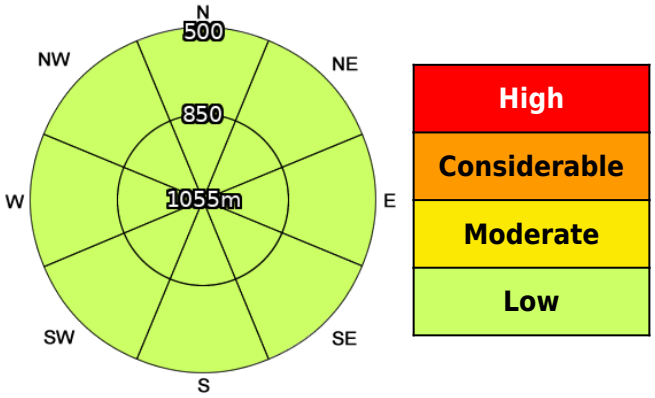
Avalanche Hazard Forecast for Monday 13/12/2021

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

After an overnight thaw the remaining old snowpack will begin to refreeze and be well bonded and stable throughout. Localised areas of fresh moderately bonded windslab will develop gradually throughout the day, with North to East aspects above 850 metres most affected. New accumulations are expected to be shallow and will mostly affect gullies and coire rims. The avalanche hazard will be Low.



Forecast Weather Influences

Early in the night the freezing level will be above the summits with rain and Storm force Southerly winds. During the early morning the freezing level will drop to around 750 metres and showers will turn to snow above this height, light snow showers will continue throughout the day. Winds will ease and back to become moderate South-Westerly.

Comments

Slightly more snow forecast for the Fannichs than the Torridon hills.
