Southern Cairngorms

Issued 12/12/2021

Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Sun 12/12/2021 TO 18:00HRS Mon 13/12/2021

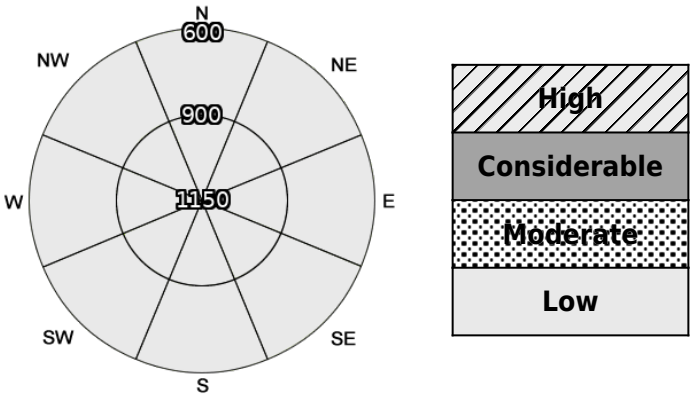

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Monday 13/12/2021

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Wet surface layers will start to refreeze in the cooler temperatures becoming progressively firmer through the day. The snow will become generally well bonded and stable on all aspects. Greatest amounts will be found in wind sheltered locations on North-West through North to East aspects above 800 metres. The avalanche hazard will be Low.

Forecast Weather Influences

Light rainfall overnight followed by a dry morning, with a trace of new snow expected during the early afternoon. Gale force Southerly winds overnight easing to strong West-South-Westerly during the day. The freezing level will rise to well above the summits overnight, lowering to around 800 metres during the morning.

Comments

Wet snowpack will become firm and icy: Very poor run-outs at present.
