

**THE AVALANCHE HAZARD WILL BE LOW**

**Avalanche Hazard Forecast for Tuesday 14/12/2021**

**Avalanche Problems**

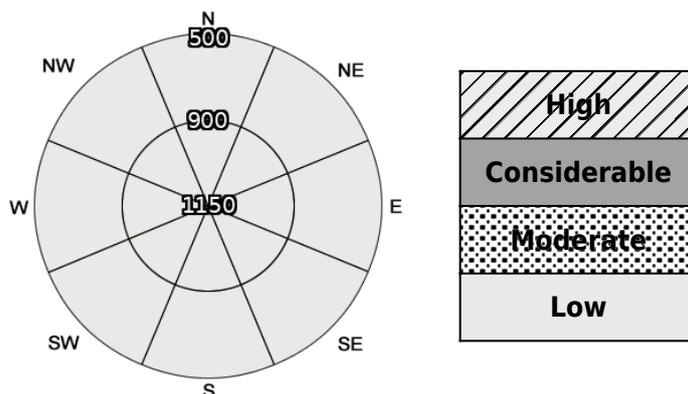

Wet Snow

Cornices

**Forecast Snow Stability & Avalanche Hazard**

New snow amounts are not expected to be significant and will quickly thaw as warm conditions affected the area. The old snowpack will remain generally well bonded in most locations. On some steeper slopes localised wet snow instabilities may develop mostly on North to Easterly aspects above 900 metres but overall stability will generally be good. The avalanche hazard will be Low.

**Forecast Weather Influences**

Snow showers dying out through Monday evening. Then a warm front will bring outbreaks of rain, preceded by a little early morning snow. Freezing level rising above the summits during the morning with precipitation falling as rain at all levels through the day. Summit winds will be strong to gale force South-Westerlies.

**Comments**

Mild conditions forecast for the next couple of days.
