

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Thursday 16/12/2021

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The snowpack will initially be soft and moist with generally good stability on all but the steepest slopes where surface wet snow instabilities are possible. A return to drier conditions through the day will aid the consolidation process in all areas. The avalanche hazard will be Low.

Forecast Weather Influences

It will remain mild with freezing levels above the summits. A period of light rain will affect all levels overnight becoming drier in the morning. Winds will be fresh to strong in exposed locations and will be mainly South-Westerly through the day.

Comments

Remaining mild.
