Southern Cairngorms

Issued 21/12/2021

Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Tue 21/12/2021 TO 18:00HRS Wed 22/12/2021

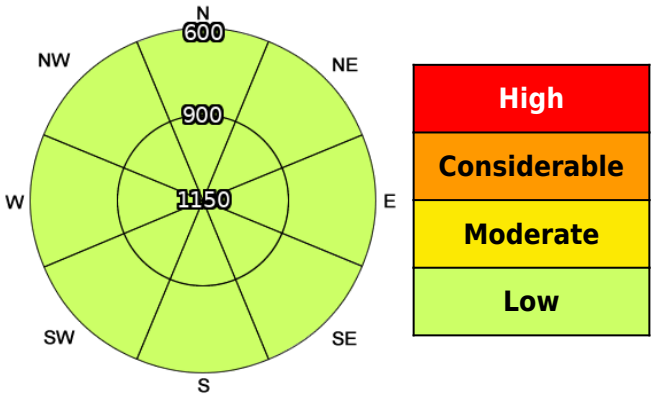

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Wednesday 22/12/2021

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Any new snowfall will not affect the current conditions. The patchy snow cover will remain firm and well bonded throughout. Greatest amounts are on North to East facing aspects above 900 metres. The avalanche hazard will be Low.

Forecast Weather Influences

Initially dry but potential for light snow around the summits in the late afternoon. Winds becoming fresh to moderate, Southerly in the morning, backing to the South-East in the afternoon.

Comments

Snow surface is firm and icy with short run-outs. Water-ice on paths and tracks.
