

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Thursday 23/12/2021

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Any quantities of new snow are not expected to be significant. Some new drifted accumulations may start to develop toward the end of the period, bringing moderately bonded deposits on high Westerly aspects above 850 metres. Elsewhere the sparse snowpack will remain patchy and stable. The avalanche hazard will be Low

Forecast Weather Influences

Outbreaks of rain, freezing rain, sleet and snow are possible at any level overnight and during the day, as a new weather system results in complex temperature variables over the period. The light Southerly airflow will strengthen to a moderate Easterly as the day progresses.

Comments

Mild for a spell before cooler conditions re-establish
