Avalanche Hazard Forecast

Issued 25/12/2021

FOR PERIOD 18:00HRS Sat 25/12/2021 TO 18:00HRS Sun 26/12/2021

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Sunday 26/12/2021

Avalanche Problems

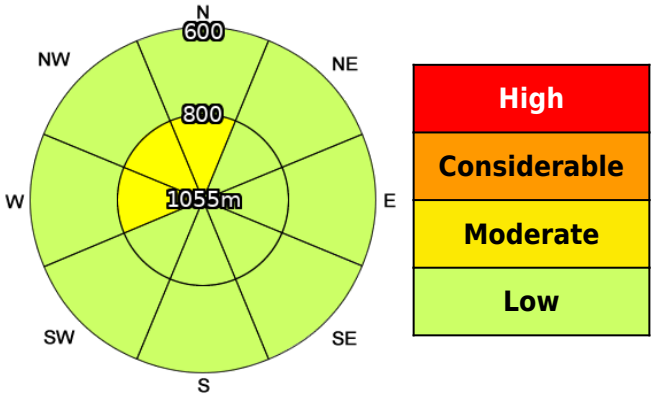

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Wind exposed aspects will continue to scour with some wind slab instabilities building depth and extent on high West through North-West to Northerly aspects above 800 meters. These accumulations while isolated will mainly affect wind sheltered coire rims, ridge crests and the tops of gullies. The avalanche hazard will be Moderate.

Forecast Weather Influences

Strong East-South-East winds will continue, with little precipitation expected. The freezing level will remain low.

Comments

Continuing bright and clear, feeling cold in the strong winds.
