

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Thursday 30/12/2021

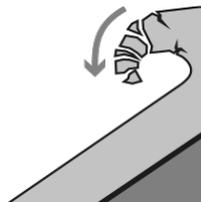

Avalanche Problems

Wind Slab

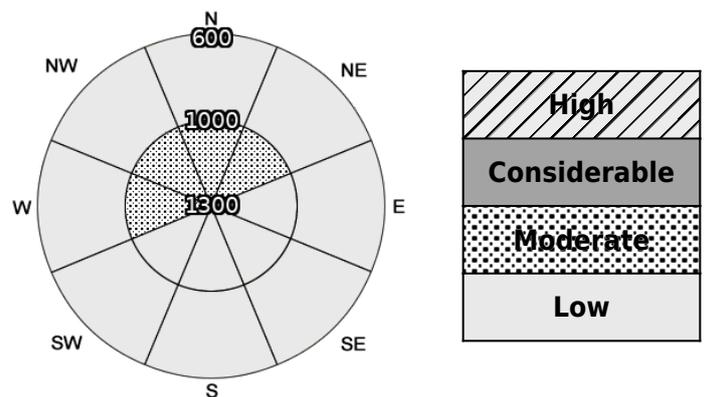

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

Recent storm windslab accumulations will begin to consolidate, however; wet snow instabilities will develop especially during the onset of rain. Areas most affected will be on steep and convex West through North to North-Easterly aspects mainly above 1000 metres. On these aspects recently developed cornices will also be prone to collapse and could potentially trigger slopes below. The avalanche hazard will be Moderate.

Forecast Weather Influences

Mostly dry with a spell of rain at all levels during the early morning. Winds will be strong to gale force and generally West-South-West in direction. The freezing level will be above the summits throughout the forecast period.

Comments

Challenging conditions in the Cairngorms today.
