Torridon

Avalanche Hazard Forecast

Issued 01/01/2022

FOR PERIOD 18:00HRS Sat 01/01/2022 TO 18:00HRS Sun 02/01/2022

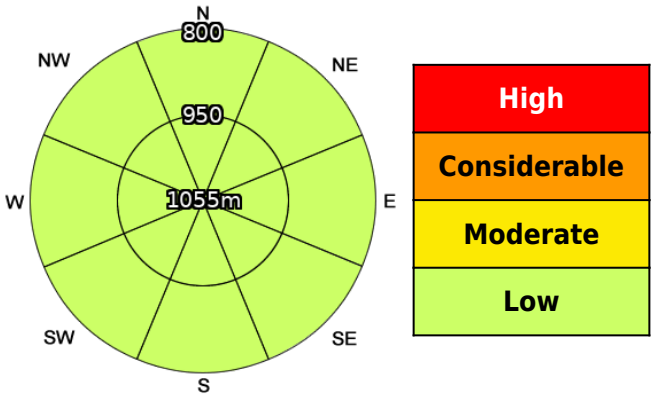
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Sunday 02/01/2022

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Accumulations of fresh snow are not expected to be significant and will be confined to summits. As the day progresses, isolated instabilities may be present on steep North to East aspects on highest summits but these will be easily avoidable. The old remaining snow patches will be stable. The avalanche hazard will be Low.



Forecast Weather Influences

Gale force South-South-Westerly winds will continue, easing only slightly over the period. The freezing level will be around 1200 metres. Showers becoming increasingly frequent through morning and near constant by evening, especially on coastal hills. Sleet or wet snow confined to the highest summits.

Comments

A colder outlook thankfully.
