Southern Cairngorms

Avalanche Hazard Forecast

Issued 01/01/2022

FOR PERIOD 18:00HRS Sat 01/01/2022 TO 18:00HRS Sun 02/01/2022

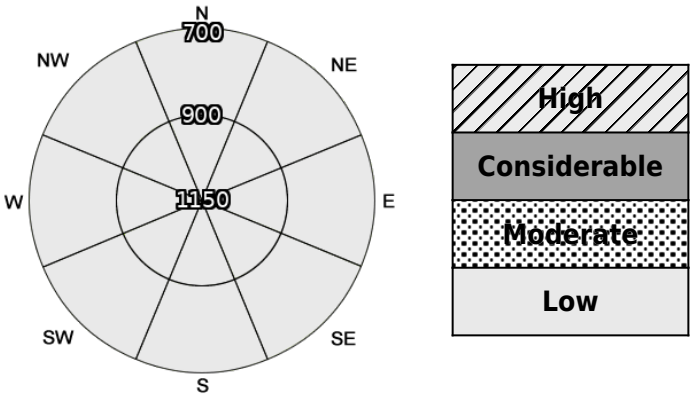

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Sunday 02/01/2022

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Snow around the higher summits may become a little firmer but any new snowfall will make little difference to the current situation. Largest areas will be found on North to East aspects above 900 metres with only small patches encountered below this altitude. The avalanche hazard will be Low.

Forecast Weather Influences

The freezing level will drop to around the higher summits. Precipitation will be light and mainly fall as rain but there is potential for a dusting of snow on the highest tops. Winds will continue to be very strong, mostly South-West occasionally South-South-West.

Comments

Winds will continue to be very strong. Likely to become a little cooler over next days.
