

**THE AVALANCHE HAZARD WILL BE MODERATE****Avalanche Hazard Forecast for Wednesday 05/01/2022****Avalanche Problems****Wind Slab****Cornices****Forecast Snow Stability & Avalanche Hazard**

Although wind exposed terrain will remain scoured, areas of unstable windslab will continue to develop and gain depth in wind sheltered locations, mainly North-East through South to West aspects, generally above 600 metres. Most affected will be coire rims, ridge flanks, gullies and steep convexities. Developing cornices will be fragile. Otherwise, a shallow and stable covering of new snow elsewhere. The avalanche hazard will be Moderate.

**Forecast Weather Influences**

Frequent, sometimes heavy snow showers, with significant drifting, will become more scattered and lighter by the afternoon with some brighter spells between showers. The gale force, generally North-West wind will progressively ease through the period, becoming light by the end of the afternoon. Remaining cold with the freezing level hovering around 400 metres with snow down to 200 metres.

**Comments**

A better day tomorrow as the wind eases, although there will remain the possibility of a wintry shower with poor visibility at times. It will continue to feel cold.
