

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Wednesday 05/01/2022

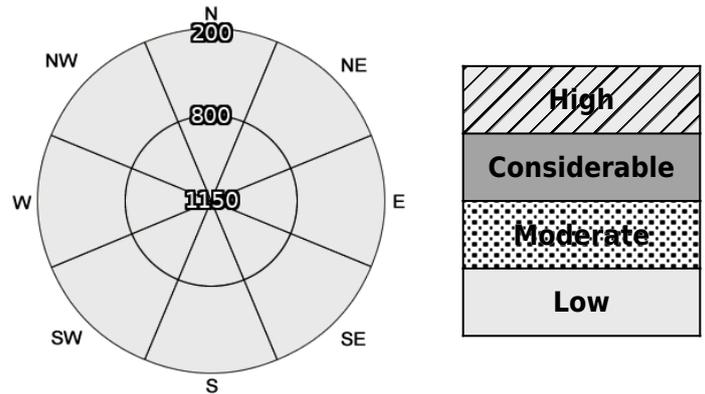

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

Localised and generally shallow areas of unstable wind slab will be present in wind sheltered locations mainly on North-East through East to South aspects above 800 metres. At lower elevations there will be a thin covering of soft unconsolidated snow. The patchy older snowpack will be frozen and stable. The avalanche hazard will be Low.

Forecast Weather Influences

Strong North-West winds and snow showers overnight. Dry during the day with winds easing to become moderate. Freezing level around 300 metres.

Comments

A brief ridge of High pressure, giving better conditions on Wednesday, is followed by unsettled but generally cold conditions.
