

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Sunday 09/01/2022

Avalanche Problems

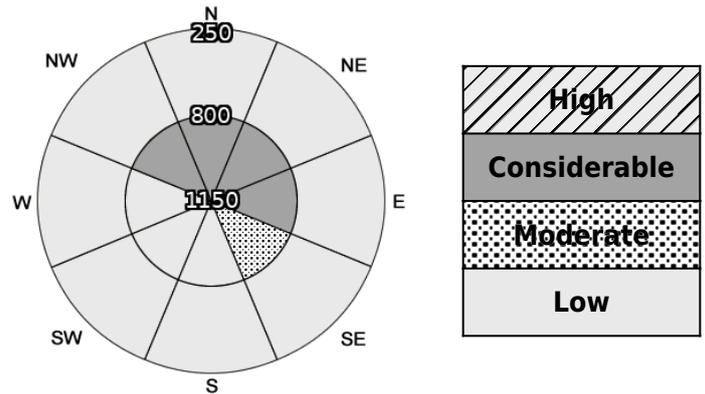

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

New snow and strong winds will form new areas of poorly bonded windslab in many sheltered locations. In particular, sheltered gullies and steep coire rims and on slopes with a North-West through North to Easterly aspect mainly above 800 metres. Cornices will be fragile. The avalanche hazard will be Considerable.

Forecast Weather Influences

Overnight, freezing level at around 400 metres, strong South-Westerly winds with snow showers falling mainly above 300 metres. The snow showers will continue through the morning, winds easing and backing to become East-South-Easterly with the freezing level slowly rising to 800 metres.

Comments

Dry but cloudy tomorrow afternoon. Early Monday morning Atlantic front bringing milder air, freezing levels rising to 2000 metres+ for 9-12 hours with rain which will initiate a gradual thaw.
