Avalanche Hazard Forecast

Issued 08/01/2022

FOR PERIOD 18:00HRS Sat 08/01/2022 TO 18:00HRS Sun 09/01/2022

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Sunday 09/01/2022

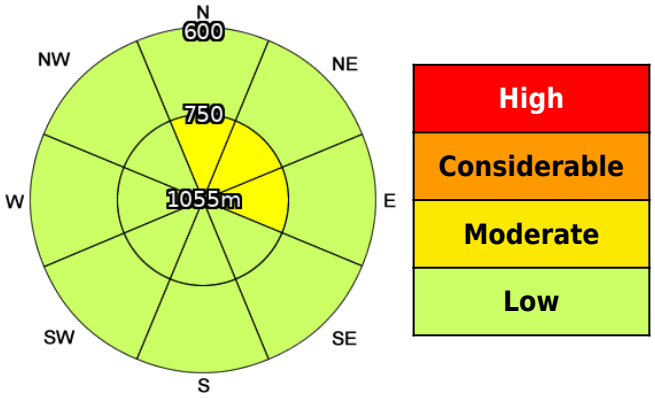
Avalanche Problems

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Isolated pockets of weakly bonded windslab will remain on steep North to East aspects where recent accumulations have gained depth, primarily above 750 metres with the tops of gullies most affected. Many exposed ridge lines are scoured. At lower levels the moist snowpack will refreeze. The avalanche hazard will be Moderate.



Forecast Weather Influences

It will be a cold night with moderate South-Westerly winds and snow flurries above 600 metres. From mid morning it will be dry as the winds decrease in strength and back progressively to the East by mid afternoon.

Comments

Milder temperatures have reduced cover at lower levels but full winter conditions at higher elevations.
