

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Monday 10/01/2022

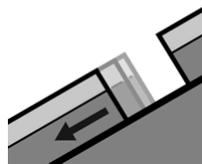

Avalanche Problems

Wet Snow

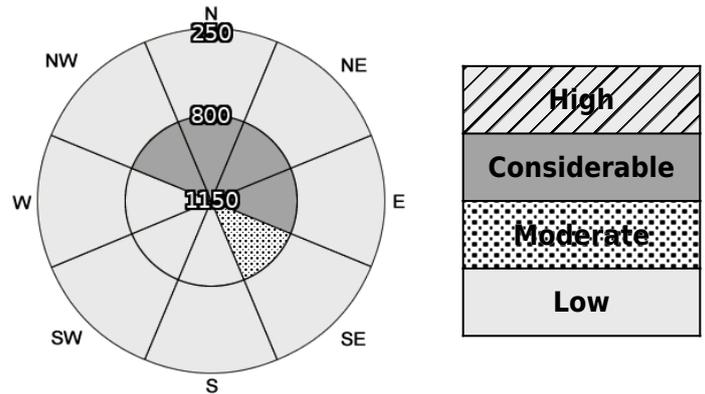

Cornices

Gliding Snow

Forecast Snow Stability & Avalanche Hazard

Much milder conditions, rain and strong winds will deplete the snowpack and also lead to wet snow instabilities on all steeper slopes. Areas mostly affected will be sheltered gullies, steep coire headwalls and steep slopes with a North-West through North to East aspect above 800 metres where avalanches are likely. Cornices will be prone to collapse affecting the slopes below. The avalanche hazard will be Considerable.

Forecast Weather Influences

Overnight, the freezing level will slowly rise to above the summits it should remain dry with light South-Easterly winds. Early morning, rain falling at all levels becoming heavy and more persistent as the day progresses. The winds will become more Southerly and strengthen with gusts of gale force.

Comments

A poor, mild, wet forecast for tomorrow, avalanches are likely.
